## 1. Introduction

This document provides information to comply with the Electronic Health Care (EHR) 2015 Edition Cures Update certification criteria 170.315(b)(10) Electronic Health Information export, and its Information Blocking act.

This document may be found at

[http://www.hc2000inc.com/Pages/MDVita\\_EHR\\_EHI\\_DataFormat.pdf](http://www.hc2000inc.com/Pages/MDVita_EHR_EHI_DataFormat.pdf)

Please, use the MDVita User Guide for instructions how to schedule an EHI export. The guide can be found in the MDVita application.

## 2. Data Files

Data files are divided in 3 groups: Raw Data, SOAP Notes, and Documents

Raw Data – These are Parquet data format files

Example of file name: Patient.parquet

For information about the Parquet data format, please visit: [Apache Parquet](#)

SOAP Notes – Patients Clinical Notes are exported in pdf format. An index raw data file is produced matching Notes to Patient “SOAPNotesIndex.parquet”. The SOAP Notes pdf documents are machine readable. The documents were built programmatically to produce human readable format.

Documents - Documents are exported in the same original format as they were uploaded to MDVita (pdf, xml, html, csv, doc, jpg, etc.). An index file is produced matching documents to Patient “DocumentsIndex.parquet”

SOAP Notes and Documents are provided by reference. A file containing URL references is created. The URL may be used to download each one of the documents. The reference files are comma delimited and structured to be machine readable for automated download of files.

SOAP Notes reference file: SOAPNotesReferences\_XXX.csv

Document reference file: DocumentsReference\_XXX.csv

XXX – represents a numeric run instance number.
