

## **I. Electronic Health Information Export**

### **1. Single Patient Export**

BESTCare2.0B allows a user to export electronic health information (EHI) for a single patient at any time without developer assistance using the following standardized file formats explained below

### **2. Multi-Patient Export**

BESTCare2.0B can export all the data for a patient population in our standardized format explained below

### **3. File Formats**

These are standardized formats. BESTCare2.0B updates all formats on a quarterly schedule unless otherwise indicated by Oracle. If a specific update or patch from Oracle is released pertaining to one of these formats, then an on-demand update is made.

#### **A. CSV**

A comma-separated values (CSV) file is a delimited text file that uses a comma to separate values. Each line of the file is a data record. Each record consists of one or more fields, separated by commas. The use of the comma as a field separator is the source of the name for this file format.

#### **B. Oracle DMP**

Oracle dump file (.DMP) is a binary storage used by Oracle users and database administrators to backup data.
