# EHI Export: TheraOffice Form and Table Documentation

Last Updated: 5/29/2024 4:00 PM EDT

# Contents

## Overview

This documentation describes each TheraOffice Electronic Health Information (EHI) table as of 05/29/2024 at 4:00 PM EDT in the current released version. The documentation reflects the most current information at the time it was produced. The documentation is broken out by form (where applicable) and then table. Documentation from a specific organization might differ based on the organization's version of TheraOffice, custom development, or definition of EHI data. Each table's file contains a description and column details. In addition to creating the extracts, the tool will also generate documentation specific to that organization's environment.

## Glossary of Terms

To assist organizations in interpreting the information here, Netsmart is providing a glossary of terms for those commonly used field descriptions.

| Field Name | Description |
| --- | --- |
| Id | The database row id of the selected record. When present, this field will often be considered a unique row identifier of the database content. |
| Pat_ID | Pat_ID is the typical method to indicate that unique patient identifier within the TheraOffice environment. |
| MODIFIED_USER | The user who last updated the row. |
| MODIFIED_DATE | The date the row was last updated. |
| CREATED_USER | The user who created the record. |
| CREATED_DATE | The date the row was created. |
